

Zebra'Dapters[®]

Part # ZD002
24" Female Plug End

Part # ZD001
72" Male Plug End

Fused Power Tap Cordsets & 'Cheater' Cords

~ A significantly **SAFER** way to obtain and use 120 Volt power ~

- **ZD002 Female End** - Safer Power for Vacuum Pumps, Tools, and Lights at the Condensing Unit or in Attic
- **ZD001 Male End** - Safer Power from Outlet to test Motors, Components & Systems
- **Both** - Fused for Safer Operations and less risk of damage to tools, equipment and personnel
- **Both** - Lighted Connector indicates power condition: **Off / Normal 120 V / or OverVoltage**

We all know a tech who's done it: It's hot, he's tired, and he makes a simple mistake when he hooks up his cordset to get power from the condensing unit to run his vacuum pump. He throws the switch on the pump and - **POOF** - the smoke escapes from the vacuum pump, rendering it useless until (or even if) expensive repairs can be made.

Zebra'Dapters provide a **visual indication** of voltage levels before damage can occur. And, if the indicator lamp is ignored, the fuse provides a last line of defense to protect your valuable tools from simple mistakes. The fused circuit also gives an extra measure of safety for you and for your customer's equipment.
