

# Zebra-Gators™

- **Full-Color Packaging - Eye-catching design.**  
Label color quickly identifies size.
- **Quality Construction - Minimizes returns and exchanges for distributor.**

- **Three Sizes - Small for small-signal.**  
Medium for loads to 15A.  
Large for loads to 30A.
- **Saves Time & Trips - Perform more accurate diagnostics with a reliable tool.**

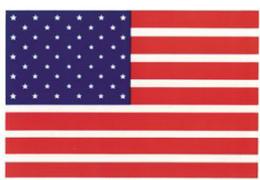

*Zebra-Gators* are alligator clip jumper wires designed for the HVAC/R Technician. Unlike competitive products, the alligator clips don't pull off (or fall off) of their wires because they are soldered, not just crimped. They carry the current they need to because they are made from wires that are the full gauge size listed. They come in as many as eight colors for the more complicated jobs. Each set comes with a hook-and-loop strap that keeps your *Zebra-Gators* organized, either in the tool box, or hanging up in your vehicle. The heavy resealable bag is also a great place to keep your jumper set neat and tangle-free.

The *Small* set includes 10 jumpers and is often used for low voltage control/manipulation. The *Medium* set has 8 jumpers and can be used for medium loads like motors. The *Large* set has 4 jumpers with heavy-jawed clamps that can carry power to heavier loads like compressors.

*Zebra-Gators'* quality and features make them the best jumper clip wire sets on the market today. Since proper diagnostics depend on jumpers that can carry the load, check your set today. If they're not "up to par", replace them with jumpers that you can depend on.
