

**Product**

AC Easy Tee® and Service Tool Kit

**Purpose**

The Asurity™ A/C Easy Tee (ET75) is a simple and effective condensate drain service port that makes it easy to comply with IMC 307.2.5. Never cut condensate lines again. Flush blockages using nitrogen, water or a shop vac without valves or moving parts that can fail.

The A/C Easy Tee gives you a solid connection to the drain line so you can get the line cleaned out correctly, the first time. This will help avoid nuisance callbacks, saving you precious time and money.

The (ST75) Service Tool Kit allows the technician to close off backflow creating full discharge of water or nitrogen to clean out the drain line. Use the straight or angled tool with a wet/dry vac, water hose, pressurized nitrogen, or pressurized air to clear drain obstruction.

**Features**

- Service condensate drains easily and quickly.
- Convenient design makes it easy to view drain pan for obstruction inside of air handler.
- Compact size allows for installation at evaporator drain pan outlet or at first 90° fitting location.
- Because there is no designated inlet or outlet, the A/C Easy Tee can be installed in variety of positions for vertical/horizontal air handlers, package units and walk-in coolers.
- No moving parts, like flappers and ball valves that often fail during use.
- Simple cap that screws off for easy access to the drain line.
- For best results, use in conjunction with A/C Easy Tee Service Tool Kit (ST75) when using wet/dry vacuum, water hose, pressurized nitrogen, or pressurized air to clear drain obstruction.

**General Specifications**

- Complies with IMC 307.2.5
- Use water hose, compressed air or 1-1/4” shop vac to service condensate lines
- Service Tool Kit includes compressed gas adapter tool, angle tool and straight tool
