

Drain IV works in

- ✓ Air Handlers
- ✓ Furnaces
- ✓ Heat Pumps
- * Commercial Systems Available

About Us

DRAIN IV was developed by an experienced kitchen remodeling contractor who not only repaired drywall from leaking HVAC condensate lines for his customers, but had his home system constantly clog from slime buildup, causing it to shutdown.

New HVAC systems are using materials that do NOT have any antimicrobial properties, causing a new problem... white slime, or Zooglea. DRAIN IV stops this slime where it lurks.

A PERFECT COMPLIMENT TO A UV LIGHT

DRAIN IV is a complementary solution to UVC lights. UVC is a great solution for killing bacteria where the light has direct contact, but UVC does not treat the drain line. Drain IV can be applied into the drip tray and/or directly into the drain line for continuous treatment.
