General Information

STERLING TUBULAR DESIGN GAS FIRED UNIT HEATER

The Sterling Tubular gas-fired unit heaters offer a highly efficient, extremely durable alternative to the traditional clam shell design. These units combine the latest tubular heat exchanger and inshot burner technology with the quality and reliability you have come to know from Sterling.

HIGH EFFICIENCY

Standard energy saving features like the direct spark ignition and power venting reduce standby losses and offer improved seasonal efficiencies. Tubular units certified by ETL as providing 83% thermal (combustion) efficiency.

TUBULAR HEAT EXCHANGER

The Sterling tubular heat exchanger has been designed to provide maximum and uniform heat transfer. The low pressure drop associated with this design enables heated air to be evenly distributed to the conditioned space. This curved, non-welded serpentine design experiences less thermally induced stress making it highly durable for significantly longer service life. All Sterling tubular heat exchangers are constructed of heavy duty 20-gauge aluminized steel. Optional 409 stainless steel heat exchangers are also available.

DIRECT SPARK IGNITION SYSTEM

Sterling Tubular units utilize a direct spark pilotless ignition of the burner, providing fast heat delivery. This highly reliable and efficient ignition system incorporates an integrated electronic control board to regulate the system sequence of operation, including an onboard LED indicator for simple troubleshooting.

VENTING

The Sterling Tubular unit heaters are ETL certified in accordance with categories I and III venting requirements. This certification allows units to be vented both vertically and horizontally using either single wall or double wall venting materials. This venting flexibility of the unit heater makes installation easier and more cost effective by allowing the installer to utilize existing venting components.

CONTROL ACCESSIBILITY

Designed with the service person in mind, every component of the Sterling unit heaters is easily accessible. Ignition and fan controls are located in one centrally located control panel. The access door provides control isolation as well as a pleasing exterior appearance.

10-YEAR WARRANTY

Sterling warranties the heat exchanger, flue collector and burners of each unit heater to be free from defects in materials and workmanship for a period of 10 years from the date of manufacture.

SEPARATED COMBUSTION - SF/SC SERIES

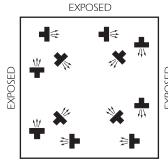

The SF/SC series heater "separates" the combustion process from the environment where the unit is installed. A power venting system draws a controlled quantity of combustion air from outside the building. The same system exhausts flue products to the outside. The burners, pilot and flue system are enclosed within the unit; thus, the entire combustion process is unaffected by the atmosphere in the space where the heater is located. Separated combustion units are designed to be installed where dusty, dirty or mildly corrosive conditions exist or where high humidity or slightly negative pressure prevail.

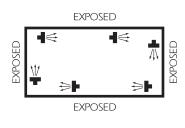

Applications

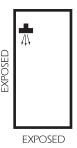

UNIT HEATER PLACEMENT

Gas-fired unit heaters are used primarily in commercial and industrial buildings such as warehouses, manufacturing areas, garages, showrooms, lobbies, etc. Placement is typically determined by air distribution requirements. Proper distributions should have air directed toward areas of greatest heat loss. Multiple units may be used to greatest effect by positioning units around the perimeter. Several units near the center and with air discharging toward outside walls may also satisfy the heating requirements. Direct air discharge on occupants should be avoided.

TYPICAL APPLICATIONS

EXPOSED

A large square area with exposed walls and roof; units are blanketing all exposed surfaces.

A narrow area with four exposed walls either with or without roof exposure.

A small area with exposed walls requiring one unit.

HOW TO CALCULATE HEAT LOSS

It is suggested that when calculating heat loss for a building, reference be made to procedures outlined in the **ASHRAE Handbook.** As an easy reference, however, the following abbreviated method may be used with a good degree of reliability.

- 1. Determine inside temperature to be maintained and the design outside temperature for your locality. The difference between these two figures is the design temperature difference.
- 2. Calculate net areas in square feet of glass, wall, floor, and roof exposed to outside temperature or unheated spaces. Calculate door as all glass.
- 3. Select heat-transfer coefficients from the table below (or the **ASHRAE Handbook**) and compute the heat-transmission loss for each area in BTU/HR by multiplying each area by the heat-transfer coefficient and the temperature difference.
- 4. Add 10% to the heat-loss figures for areas exposed to prevailing winds.
- 5. Calculate the volume of the room or area in cubic feet and multiply by the estimated number of air changes per hour due to infiltration (usually from one to two). Determine the number of cubic feet per hour of air exhausted by ventilating fans or industrial processes. Substitute the larger of these two figures in the formula to determine the heat required to raise the air from outside to room temperature —

BTU/HR = cubic feet per hour x temperature difference

6. The totals of BTU/HR losses from 3, 4 and 5 (above) will give the total BTU/HR to be supplied by unit heaters. (Note: If processes performed in the room liberate considerable amounts of heat, this may be determined as accurately as possible and subtracted from the total).

GG Series — Low Profile Unit Heater

RESIDENTIAL AND COMMERCIAL CERTIFICATIONS

The Sterling "GG" Series unit heater conforms with the latest ETL certification standards. Design certified under ANSI Z83.8 for Industrial/Commercial use and the more demanding requirements of CSA 10.96 USA (2nd ed.) "Unit Heaters for Residential Installation", make this low profile unit heater the ideal selection.

STANDARD FEATURES

- 82+% Thermal Efficiency
- Redundant Single-Stage Gas Valve
- Residential Certification
- 120/24V Control Transformer
- OSHA Fan Guard

- 115/1/60 Fan Motor with Internal Overload Protection
- Direct Spark Ignition
- 20-Gauge Cabinet with **Baked Enamel** Finish
- 10 Year Heat Exchanger Warranty

- Right Hand Control Access -Field Convertible to Left Hand
- High Limit Switch
- Air Pressure Switch
- Natural or Propane Gas
- Gas Conversion Kit Included

- Field Convertible to Separated Combustion
- Easy Access Control Panel
- 321 Stainless Steel Burner Box
- 20-Gauge Aluminized Heat Exchanger
- Power Vented

OPTIONAL FEATURES

- 409 Stainless Steel Heat Exchanger
- Two-Stage Gas Control (Sizes 60-120 Only)
- Stainless Steel Flue Collector
- Supply Voltage (Field Mounted Transformers):
 - -208/1/60230/1/60
 - -208/3/60230/3/60
 - 460/3/60 575/3/60
- Vent Caps
- Totally Enclosed Motors (Sizes 60-120 Only)
- Pressure Regulator (1/2 - 2 psi)
- Single & Two-Stage Mercury Free Thermostats
- Line Volt Thermostat
- Locking **Thermostat** Cover
- 24V SPST Relay
- Concentric Vent Kits (For All Separated Combustion Installations)

^{*}For all installations, the flue collar is included with the unit and should be field installed per the instructions included with the unit.

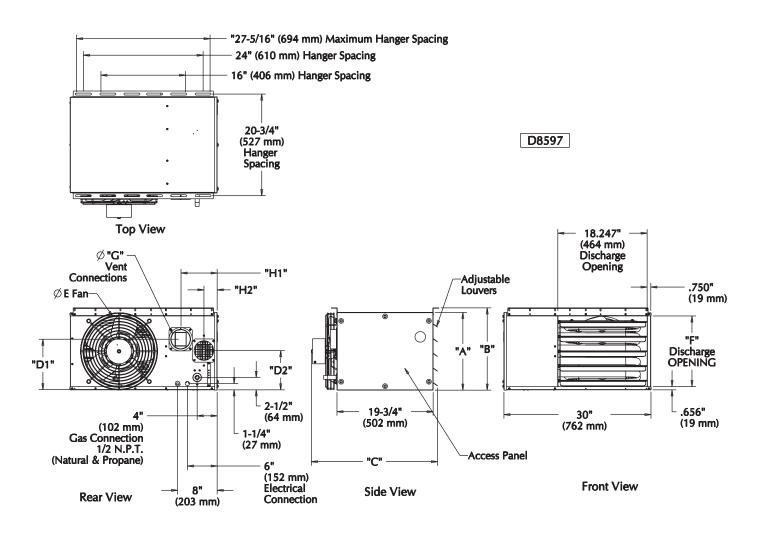

For installations in Canada, any reference to deration at altitudes in excess of 2,000 ft. (610m) are to be ignored. At altitudes of 2,000 ft. to 4,500 ft. (610 to 1372m), the unit must be field derated to 90% of the normal altitude rating, and be so marked in accordance with the ETL certification. See unit installation, operation and maintenance manual for deration information.

^{**4-5&}quot; reducer supplied where required.

[†] Ratings shown are for unit installations at elevations between 0 and 2,000 ft (0 to 610m). For unit installations in USA above 2,000 ft. (610m), the unit input must be field derated 4% for each 1,000 ft. (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (NFPA No. 54).

GG Series — Low Profile Unit Heater Dimensional Data

DIMENSIONS .XXX STANDARD UNITS DIMENSIONS IN PARENTHESIS (XXX) MILLIMETERS

TF/TC Series — Tubular Unit Heater

STANDARD FEATURES

- In-Shot Burner Design
- 20-Gauge Steel Jacket with Baked **Enamel Finish**
- Main Control Panel
- 115/1/60 Supply Voltage
- Direct Spark Ignition
- Redundant Single-Stage Gas Valve
- 115/24 Volt Control Transformer
- Individually Adjustable and Removable Louvers
- Power Vented
- 115/1/60 Volt Motor with Internal Overload Protection
- 10 Year Heat Exchanger, Flue Collector and **Burner Warranty**
- 82+% Thermal Efficiency

OPTIONAL FEATURES

- Stainless Steel Heat Exchanger, Burners and/or Flue Collector
- Supply Voltages: 208 & 230/1/60 and 230, 460, 575/3/60
- Premium Efficiency **Blower Motors** in ODP and TE Types
- Two-Stage and Various Electronic Modulation Gas Controls
- Discharge Nozzles (30°, 60° & 90°) or **Duct Flange** Assembly

[†] Ratings shown are for unit installations at elevations between 0 and 2,000 ft (0 to 610m). For unit installations in USA above 2,000 ft. (610m), the unit input must be field derated 4% for each 1,000 ft. (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (NFPA No. 54).

For installations in Canada, any reference to deration at altitudes in excess of 2,000 ft. (610m) are to be ignored. At altitudes of 2,000 ft. to 4,500 ft. (610 to 1372m), the unit must be field derated to 90% of the normal altitude rating, and be so marked in accordance with the ETL certification. See unit installation, operation and maintenance manual for deration information.

^{*} Flue collar is factory supplied with unit; to be field installed per included instructions. ** LEGEND: SP = SHADED POLE PSC = PERMANENT SPLIT CAPACITOR

SF/SC Series — Separated Combustion Unit Heater

STANDARD FEATURES

- Enclosed Combustion System
- 20-Gauge Aluminized Steel Tubular Heat Exchanger
- 115/24 Volt Control Transformer
- 83% Thermal Efficiency
- Combustion Air Pressure Switch
- ODP Motor (with Overload Protection)
- Redundant Single-Stage Gas Valve
- 20-Gauge Steel Cabinetry with Baked **Fnamel Finish**
- Direct Spark Ignition System
- 115/1/60 Supply Voltage
- Rear Burner Access
- Power Vented
- Individually Adjustable and Removable Horizontal Louvers
- Complete Belt/Fan Guard
- Main Control Panel
- 10 Year Heat Exchanger, Flue Collector and **Burner Warranty**

OPTIONAL FEATURES

- Stainless Steel Heat Exchanger, Burners, and/or Flue Collector
- Supply Voltages: 208 & 230/1/60 and 208, 230, 460, 575/3/60
- Two-Stage and Various Electronic Modulation Gas Controls
- Premium Efficiency Blower Motors in ODP & TE Types
- Discharge Nozzles (30°, 60° & 90°) or **Duct Flange** Assembly
- Combustion Air Inlet Kits (allows concentric venting with horizontal or vertical termination)

Unit Number Description

1, 2 - Unit Type [UT]

SF - Separated Combustion Tubular Propeller SC - Separated Combustion Tubular Blower

3, 4, 5 - Capacity [CA]

100 - 100,000 BTU/HR

125 - 125,000 BTU/HR

150 - 150,000 BTU/HR 175 - 175,000 BTU/HR

200 - 200,000 BTU/HR 250 - 250,000 BTU/HR

300 - 300,000 BTU/HR

350 - 350,000 BTU/HR

400 - 400,000 BTU/HR

6 - Furnace Type [FT]

7 - Heat Exchanger Construction Material [FM]

- 1 Standard (Aluminized) Steel 2 409 Stainless Steel

8 - Gas Type [GT]

N - Natural Gas

P - Propane Gas (LP)

9 - Altitude [AL]

S - 0-4.999 ft.

T - 5,000–11,999 ft.

Note: Installations over 2,000 ft. require gas input deration in the field. Refer to unit installation instructions

10 - Direct Spark Gas Control [GC]

- 1 Single Stage
- 2 Two Stage
 3 Electronic Modulation w/Room Sensing
- 4 Electronic Modulation w/Duct Sensing
- 5 Electronic Modulation w/Duct Sensing & Room Ovrd. Stat
- 6 Electronic Modulation w/External 4-20 mA Input
- 7 Electronic Modulation w/External 0-10 VDC Input

11 - Supply Voltage [SV]

- **1** 115/1/60 **5 -** 230/3/60 2 - 208/1/60 6 - 460/3/60 3 - 230/1/60 7 - 575/3/60
- 4 208/3/60 Z - Special

Note: Supply Voltages [SV] 2-7 include step down transformer. Field mounted for propeller units, factory mounted for blower units.

12 - Motor Type [MT]

- 1 Open Drip Proof (Standard)2 Totally Enclosed
- 3 Premium Efficiency, Open Drip Proof (Blowers Only)
- 4 Premium Efficiency, Totally Enclosed (Blowers Only)

13 - Blower Motor Sizes [MS]**

A - 1/4 HP w/Contactor C - 1/2 HP w/Contactor

D - 3/4 HP w/Contactor

F - 1 HP w/Contactor

G - 1-1/2 HP w/Contactor H - 2 HP w/Contactor **J -** 1/4 HP

P - 1/2 HP w/Magnetic Starter R - 3/4 HP w/Magnetic Starter S - 1 HP w/Magnetic Starter T - 1-1/2 HP w/Magnetic Starter

U - 2 HP w/Magnetic Starter W - 1/4 HP w/Magnetic Starter 0 - None/Not Applicable

L - 1/2 HP
**Notes: 1. All 3-phase units [SV = 4, 5, 6, 7] include a contactor as standard.

2. All single phase units [SV = 1, 2, 3] include a contactor for units equipped with 3/4 HP. motor or higher [MS = D, F, G, H]
3. [MS] options J, L only available with [SV] option 1 (115/1/60).

14 - Accessories [AS]

FACTORY INSTALLED

M6 - OSHA Type Fan Guard (Propellers Only)

M8 - Discharge Duct Flange (Blowers Only)

P4 - Terminal Block Wiring

P6 - Summer/Winter Switch

53 - 409 Stainless Steel Flue Collector

S5 - 304L Stainless Steel Burners

† FIELD INSTALLED (AS-

† All Field Installed Accessories are to be entered as a separate line item using catalog number which utilizes "AS" as a prefix. i.e: A7 becomes AS-A7.

- A7 Pressure Regulator 1/2-2 psi
- F1 1-Stage T675A Ductstat (Blowers Only) F2 - 2-Stage T678A Ductstat (Blowers Only)
- G1 1-Stage T87K Mercury Free Thermostat
- w/Subase Kit G2 - 1-Stage T87K Mercury Free Thermostat
- w/TG511A Guard Kit G3 1-Stage T834N Mercury Free Thermostat/Fan Switch
- **G5 -** 2-Stage TH5220D Mercury Free Thermostat w/Subbase
- G6 Locking Thermostat Cover G8 - 1-Stage T6169C Line Voltage Stat

Thermostat

w/Subbase G9 - 1-Stage T822K Mercury Free

- M2-2 Vent Caps (5") (Unit Capacity 100-250) **M2-3 -** Vent Caps (6") (Unit Capacity 300-400) M7 - 2 to 4 Point Suspension Kit (Propellers Only)
- P5 24V SPST Relay-Specify Purpose
- X2 30 Degree Downturn Nozzle
- X3 60 Degree Downturn Nozzle
- X4 90 Degree Downturn Nozzle
- X5 Vertical Louver Kit
- X7-H5 Horiz. Combustion Air Inlet Kit, 5 inch (Unit Capacity 100-250)
- X7-H6 Horiz. Combustion Air Inlet Kit, 6 inch (Unit Capacity 300-400) X7-V5 - Vert. Combustion Air Inlet Kit, 5 inch
- (Unit Capacity 100-250) X7-V6 - Vert. Combustion Air Inlet Kit, 6 inch (Unit Capacity 300-400)

[†] Ratings shown are for unit installations at elevations between 0 and 2,000 ft (0 to 610m). For unit installations in USA above 2,000 ft. (610m), the unit input must be field derated 4% for each 1,000 ft. (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (NFPA No. 54).

For installations in Canada, any reference to deration at altitudes in excess of 2,000 ft. (610m) are to be ignored. At altitudes of 2,000 ft. to 4,500 ft. (610 to 1372m), the unit must be field derated to 90% of the normal altitude rating, and be so marked in accordance with the ETL certification. See unit installation, operation and maintenance manual for deration information.

For installations in Canada, any reference to deration at altitudes in excess of 2,000 ft. (610m) are to be ignored. At altitudes of 2,000 ft. to 4,500 ft. (610 to 1372m), the unit must be field derated to 90% of the normal altitude rating, and be so marked in accordance with the ETL certification. See unit installation, operation and maintenance manual for deration information.

[†] Ratings shown are for unit installations at elevations between 0 and 2,000 ft (0 to 610m). For unit installations in USA above 2,000 ft. (610m), the unit input must be field derated 4% for each 1,000 ft. (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (NFPA No. 54).

^{*} Flue collar is factory supplied with unit; to be field installed per included instructions.

Duct Furnaces

- QVED SERIES
- QVES SERIES
- QVSD SERIES

Sterling HVAC's line of high efficient indoor duct furnaces are designed for ducted air applications. Indoor duct furnaces are designed for use with existing systems for heating, heating / cooling or make-up air systems. Sterling's indoor duct furnaces are available in 10 sizes (100 – 400 MBH) and equipped with electronic spark ignition (100% safety shutoff on LP models), 115 volt power, vent system pressure switch, high limit switch and 24 volt control transformer.

All duct furnaces are ETL certified for installation upstream or downstream from cooling coils (stainless steel heat exchangers are recommended).

Sterling HVAC's products are proudly manufactured in the USA.

HEAT EXCHANGERS

All heat exchangers feature 20-gauge tubes and 18-gauge headers and are available in 3 types of steel:

- Aluminized Steel (Standard)
- 409 Grade Stainless Steel (Optional)
- 321 Grade Stainless Steel (Optional)
- Stainless steel heat exchangers recommended for applications where entering air is below 40°F (4.4°C) and/or duct furnaces are located downstream from cooling coils.

APPLICATIONS

Sterling's duct furnaces are available in variable configurations to meet all application needs. QVED (bottom burner access) and QVES (side burner access) models offer integral power venting through a concentric vent for both outside combustion air and flue gas exhaust.

The QVSD (separated combustion) is designed to be installed in dusty, dirty or mildly corrosive environments, or where high humidity or slightly negative pressures exist. All critical components including the burners, pilot and flue systems are fully enclosed within the unit and protected from the elements insuring clean and efficient combustion. QVSD units are perfect for manufacturing and automotive facilities and greenhouse applications.

QVED/QVES Series

QVSD Series

QVED/QVES Series — Power Vented Duct Furnace QVSD — Seperated Combustion Duct Furnace

STANDARD FEATURES

- OVED Bottom Access Panel
- QVES-Side Access Panel, Right Side
- OVSD-Separated Combustion
- 80% Thermal Efficiency
- Aluminized Steel Heat Exchanger -20-gauge
- Aluminized Steel Burners with **Stainless** "Burner Shade Port Protector"
- For Natural and **Propane Gases**
- Aluminized Steel Flue Collector
- 115/1/60 Supply Voltage
- Spark Ignited Intermittent Pilot with Electronic Flame Supervision
- Power Venter
- Redundant Single Stage Combustion Gas Valve
- High Limit Switch
- Control Transformer. 115/24V
- Combustion Air Pressure Switch
- Adjustable Burner Air Shutters
- Four Point Suspension
- QVSD Enclosed Combustion System
- 20-Gauge Steel Cabinet with **Baked Enamel** Finish
- QVSD-Combustion Air/ Flue Connections (see Vent Caps; Two Required per Unit)

[†] Ratings shown are for unit installations at elevations between 0 and 2,000 ft (0 to 610m). For unit installations in U.S.A. above 2,000 ft. (610m), the unit input must be derated 4% for each 1,000 ft. (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (N.F.P.A. No. 54).

QVSD Separated Combustion Duct Furnace — Bottom Service Access Only

DIMENSIONS XXX STANDARD UNITS DIMENSIONS IN PARENTHESIS (XXX) MILLIMETERS

For installations in Canada, any reference to deration at altitudes in excess of 2,000 ft. (610m) are to be ignored. At altitudes of 2,000 ft. to 4,500 ft. (610 to 1372m), the unit must be derated to 90% of the normal altitude rating, and be so marked in accordance with the ETL certification.

^{*} Flue collar is factory supplied with unit; to be field installed per included instructions.

CAB Series — Cabinet Blower

STANDARD FEATURES

- Sterling Cabinet Blowers have been especially designed for use with Sterling Duct Furnaces.
- Duct Flange at rear to facilitate attaching Ductwork.
- Side panels removable for inspection, servicing and motor maintenance.
- Specify Unit Number of both Cabinet Blower and Duct Furnace on Order, thus CAB2 150 indicates CAB2 Blower with 150,000 BTU Duct Furnace.
- Four sizes provide CFM capacities ranging from 1,250 to 8,000 CFM $(0.59 \text{ to } 3.78 \text{ m}^3/\text{s}).$
- Sheet metal duct pieces for connecting Cabinet Blower to Duct Furnace are furnished only with Sterling Cabinet Blower-Duct Furnace combinations.
- Cabinet finished in baked enamel.

^{*}Never use a single cabinet blower to handle more than one duct furnace. CAB-4 has two blowers driven by one motor.

Sterling reserves the right to change specifications without incurring obligations.

Cabinet blower units are not certified by ETL.

^{**}Standard filters are 1" thick throw away type. Side panels removable for inspection, servicing and motor maintenance. Cabinet painted gray enamel.

*External	-	araccii		ichos (۸dd		CCUITO	dron o	f tha d	luct fur	naco a	nd the	nracc	ıra dro	n of th	e duct	work i		rmina	tho

^{*}External static pressure in inches of W.C. Add the pressure drop of the duct furnace and the pressure drop of the ductwork to determine the total external static pressure.

Accessories [AC]

FACTORY INSTALLED

A8 - INPUT DERATE Series QVED, QVES, QVSD

Factory Installed

Unit is derated up to 50% for specific applications.

K4 - FAN TIME DELAY Series QVED, QVES, QVSD

Field Installed

Thermal bi metalic type time delay is standard on all units except duct furnaces. Provides a 60 delay on and 45 second delay off for blower operation.

K5 - AIR FLOW PROVE SWITCH Series QVED, QVES and QVSD

Factory Installed

A Dwyer 1910-0 pressure switch with an operating range of 0.15 - 0.5" WC.

M6 - OSHA TYPE FAN GUARD Series TF, SF

Factory installed available on series TF and SF only, standard on series GG. Required for installations that must conform to OSHA standards. Also known as fingerproof fan guards.

M8 - DISCHARGE DUCT FLANGE ASSEMBLY Series TC, SC

Factory Installed

(Specify — No Charge) Used in lieu of louvers on blower units for incorporating field duct work.

P4 - TERMINAL BLOCK WIRING Series TF, TC, SF, SC, QVED, QVES, QVSD Factory Installed

Provides specific terminal designation for field wiring.

P6 - SUMMER/WINTER SWITCH Series TF, TC, SF, SC, QVED, QVES, QVSD

Factory Installed

Allows operation of fan or blower for ventilating purposes during hot summer months (manually operated).

S1 - 409 STAINLESS STEEL BURNERS Series QVED, QVES, QVSD

Factory Installed

409 stainless steel burners in lieu of the standard aluminized steel burners.

S3 - STAINLESS STEEL FLUE COLLECTOR All Series and Sizes

Factory Installed

409 Stainless steel flue collector in lieu of standard aluminized steel collector.

S5 - STAINLESS STEEL BURNERS Series TF, TC, SF, SC

Factory Installed

304L Stainless steel in-shot burners in lieu of the standard aluminized steel in-shot

FIELD INSTALLED

A7 - PRESSURE REGULATOR 1/2-2 PSI All Series & Sizes

Field Installed

Required where main line pressure exceeds 14" WC (1/2 psig), must specify incoming pressure when ordered. One regulator per unit required, shipped separately.

F1 - ONE STAGE DUCTSTAT Series TC, SC, QVED, QVES, QVSD

Field Installed

Single pole, double throw. 55-175°F setpoint range. [2"Wx5-5/8"Hx2-7/16"D]

F2 - TWO STAGE DUCTSTAT Series TC, SC, QVED, QVES, QVSD

Field Installed

Single pole, double throw. 55-175°F setpoint range. [2"Wx5-5/8"Hx2-7/16"D]

G1 - ONE STAGE T87K (MERCURY-FREE) THERMOSTAT **WITH SUBBASE** All Series and Sizes

Field Installed

Single stage heating thermostat with subbase. Includes fan switching relay. Standard round styling suitable for any decor. 40-90°F range.

G2 - ONE STAGE T87K (MERCURY-FREE) THERMOSTAT WITH TG511A GUARD All Series and Sizes

Field Installed

Same features as "G1" except a tamper proof guard is included.

G3 - ONE STAGE T834N (MERCURY-FREE) THERMOSTAT WITH FAN SWITCH All Series and Sizes

Field Installed

Single stage heating thermostat with fan switch. Manufactured exclusively for Sterling with a "Sterling" logo face plate. 50-90°F range. [2-3/8" W x 4-3/4" H x 1-1/2" D]

G5 - TWO STAGE TH5220D (MERCURY-FREE) THERMOSTAT WITH SUBBASE All Series and Sizes

Field Installed

Two stage heating and two stage cooling with system and fan switching and built in 10°F heating/cooling differential. Includes fan relay. Heating 40-90°F range, Cooling 50-99°F. [5-13/16" W x 3-9/16" H x 1-1/2" D]

G6 - LOCKING THERMOSTAT COVER All Series and Sizes

Field Installed

Universal locking thermostat cover for use with all thermostats listed.

G8 - ONE STAGE T6169C LINE VOLTAGE STAT WITH SUBBASE **All Series and Sizes**

Field Installed

Single stage heating only thermostat. 115 volt operation. 44-86°F range [4-1/2" W x 4-5/8" H x 1-7/8" D]

G9 - ONE STAGE T822K (MERCURY-FREE) THERMOSTAT All Series and Sizes

Field Installed

Single stage heating only thermostat with subbase. 24 volt operation. 50-90°F range. [2-7/8" W x 4-3/4" H x 1-1/2" D]

H5 - LOW AMBIENT CONTROL Series QVED, QVES and QVSD

Field Installed

Disengages duct furnace(s) from firing in times of mild ambient temperatures.

M2 - 1, 2, 3 - VENT CAP Series TF, TC, SF, SC, QVED, QVES, QVSD

Field Installed

4 (QVED, QVES, QVSD only), 5 or 6 inch vent cap for use with series TF, TC, SF, SC, QVED, QVES, QVSD. Must indicate unit size when ordered.

M3-1 - ADAPTOR

Series QVED, QVES and QVSD

Field Installed

4 to 5" flue vent adaptor for use with 100 through 175 MBH power vented units. Power vented unit capacities 300, 350 and 400 require 5 to 6" flue vent adaptor which is supplied with the unit as standard equipment.

M4 - VERTICAL CONCENTRIC FLUE KIT Series OVSD

Field Installed

Allows for one 8 inch vent/combustion air vertical penetration through a structure. Kit includes collection box, 5" flue gas vent cap and 8" combustion air inlet cap.

M5- HORIZONTAL CONCENTRIC FLUE KIT Series QVSD

Field Installed

Allows for one 8 inch vent/combustion air horizontal penetration through a structure. Kit includes collection box, 5" flue gas vent cap and 8" combustion air inlet cap.

M7- 2 to 4 POINT SUSPENSION KIT Series TF, SF

Field Installed

Kit converts 2 point unit heater suspension to 4 point.

P2 - ADJUSTABLE HIGH LIMIT SWITCH Series QVED, QVES and QVSD

Field Installed

Adjustable switch used in conjunction with the standard header mounted high limit switch.

Accessories [AC]

P3 - ADJUSTABLE FAN SWITCH Series QVED, QVES, QVES and QVSD

Field Installed

Adjustable switch used to cycle a separate blower.

P5 - 24 VOLT RELAY All Series and Sizes

Field Installed

Specify purpose. 24 volt SPST relay.

Q7 - HORIZONTAL AND VERTICAL LOUVERS Series QVED, QVES and QVSD Field Installed

For four way deflection on duct.

S4 - 409 STAINLESS STEEL DRAIN PAN Series QVED, QVES

Field Installed

Condensate drain pan typically used when cooling coils are installed upstream of duct.

VC - 4 VENT CAP Series GG

Field Installed

4" vent cap for use with series GG.

X2 - 30° NOZZLE Series GG, TF, TC, SF, SC

Field Installed

Directs the discharge air at a 30° angle. Air can be directed up to 60° by adjusting the horizontal louvers. Louvers are supplied with the unit heater and must be reinstalled in the nozzle discharge. Must indicate unit size when ordered.

X3 - 60° NOZZLE Series GG, TF, TC, SF, SC

Field Installed

Directs the discharge air at a 60° angle. Air can be directed up to 90° by adjusting the horizontal louvers. Louvers are supplied with the unit heater and must be reinstalled in the nozzle discharge. Must indicate unit size when ordered.

X4 - 90° NOZZLE Series GG, TF, TC, SF, SC

Field Installed

Directs the discharge air at a 90° angle. Louvers are supplied with the unit heater and must be reinstalled in the nozzle discharge. Must indicate unit size when ordered. X5 - VERTICAL LOUVER KIT Series TF, TC, SF, SC

Field Installed

Vertical Louvers to provide 4 way air deflection. Must indicate unit size when ordered.

X7 - 4, 5 COMBUSTION AIR INLET KIT

Field Installed

Allows for one 6 or 8" vent/combustion air opening through a structure. One kit permits for either horizontal or vertical applications. *Kit required for converting a series GG to separated combustion*.

X7 - H5, H6 HORIZONTAL COMBUSTION AIR INLET KIT Series SF, SC

Field Installed

Allows for one 8 or 10" horizontal vent/combustion air opening through a structure. Must indicate unit size when ordered.

X7 - V5, V6 VERTICAL COMBUSTION AIR INLET KIT Series SF, SC

Field Installed

Allows for one 8 or 10" vertical vent/combustion air opening through a structure. Must indicate unit size when ordered.

Heat Throw Data

NOTES: 1. All throw data shown below is for tubular unit heaters only – excludes Series QVED, QVES, QVSD and CAB.

- 2. All throw data figures are approximations. Allowances should be made for optimum performance, altitude, etc.
- 3. "NR" Units not recommended at these mounting heights.
- 4. 30°, 60° and 90° nozzles are shipped unassembled.

GG Series Typical Standard Specification

Furnish and install, where indicated or scheduled on plans, gas-fired unit heaters manufactured by Sterling HVAC. All heaters are to have a minimum thermal efficiency of 82%. The heat exchanger consists of aluminized steel tubes not lighter than 20-gauge. Burner system is to be of the "single-orifice burner" design. A direct spark ignition system with integrated control and redundant gas valve shall be utilized. Flame rectification shall be independent of the spark igniter, allowing true indication of complete ignition of the burner. Most cabinetry and trim pieces shall be fabricated of 20-gauge material, and finished with a baked gray enamel.

Separated combustion style units must utilize clean air from the outside of the structure for combustion purposes. A concentric type adapter must be used at the point of building termination. This adapter will allow for the outside air to enter and combustion flue gases exit through one opening.

Heaters shall be equipped with a 120/24 volt transformer; factory wiring shall permit the use of propeller fan for continuous air circulation when combined with manufacturers (optional) 24 volt summer/winter single stage thermostat. The control transformer and pressure switch shall be factory mounted in a main control cabinet located on the side of the unit; the side panel is removed to create easy access and all wiring information will be indicated on the inside control cabinet.

Units will be equipped with a low voltage automatic reset high temperature control, wired to de-energize the main gas valve and maintain fan operation until the high temperature control resets. Units will be equipped with 120/1/60 volt motors which include internal automatic reset thermal overload protection. Fans will be hubbed with aluminum blades and have OSHA-approved fan guard protection. Adjustable and individually removable horizontal louver blades shall be provided for directing air flow.

All units and component assemblies shall be warranted for a period of one year from the date of shipment from the factory or 18 months from the date of manufacture, whichever occurs first. All burners, heat exchangers, and flue collectors shall carry a ten year non-prorated limited warranty on materials and workmanship (subject to appropriate disclaimers).

TF/TC Series Typical Standard Specification

Furnish and install, where indicated or scheduled on plans, gas-fired unit heaters manufactured by Sterling HVAC. All heaters are to have a minimum thermal efficiency of 83%. The heat exchanger consists of aluminized steel tubes not lighter than 20-gauge. Burners are to be of the "in-shot" design. A direct spark ignition system with integrated control and redundant gas valve shall be utilized. Flame rectification shall be independent of the spark igniter allowing true indication of complete ignition of the burner. Most cabinetry and trim pieces shall be fabricated of 20-gauge material and finished with a baked gray enamel.

All line voltage wiring shall be completely enclosed in flexible conduit. Heaters shall be equipped with a 120/24 volt controls transformer. Factory wiring shall permit the use of propeller fan on TF units and blower on TC units, for continuous air circulation when combined with manufacturer's (optional) 24-volt summer/winter single stage thermostat. The control transformer and pressure switch shall be factory mounted in a main control panel located on the side of the unit; this panel creates easy access and all wiring information will be indicated on the inside control panel door.

Units will be equipped with a low voltage automatic reset high temperature control, wired to de-energize the main gas valve and maintain fan or blower operation until the high temperature control resets. Units will be equipped with 120/1/60 volt motors, which include internal automatic reset thermal overload protection. TF unit fans will be hubbed with aluminum blades and have fan guard protection. TF units with inputs greater than 250,000's BTU's shall be equipped with dual motors and fan blades for optimum air distribution. TC units shall have centrifugal blowers with an OSHA-type belt guard. TC units with inputs greater than 250,000 BTU's shall be equipped with dual blowers on a single shaft for optimum air distribution. Adjustable and individually removable horizontal louver blades shall be provided on all units for directing air flow.

All units and component assemblies shall be warranted for a period of one year from the date of shipment from the factory or 18 months from the date of manufacture, whichever occurs first. All burners, heat exchangers, and flue collectors shall carry a ten year non-prorated limited warranty on materials and workmanship (subject to appropriate disclaimers).

SF/SC Series Typical Standard Specification

Furnish and install, where indicated or scheduled on plans, gas-fired unit heaters manufactured by Sterling HVAC. All heaters to be designed to separate the combustion process from the environment where the units are installed; the burners, igniter and flue system will be enclosed within the unit and a power venting system will both draw in combustion air from outside the space and exhaust flue gas products to the outside. All heaters are to have a minimum thermal efficiency of 83%. The heat exchanger consists of aluminized steel tubes not lighter than 20-gauge. Burners are to be of the "in-shot" design. A direct spark ignition system with integrated control and redundant gas valve shall be utilized. Flame rectification shall be independent of the spark igniter allowing true indication of complete ignition of the burner. Most cabinetry and trim pieces shall be fabricated of 20-gauge material and finished with baked gray enamel.

All line voltage wiring shall be completely enclosed in flexible conduit. Heaters shall be equipped with a 120/24 volt controls transformer. Factory wiring shall permit the use of propeller fan on SF units and blower on SC units for continuous air circulation when combined with manufacturer's (optional) 24-volt summer/winter single stage thermostat. The control transformer and pressure switch shall be factory mounted in a main control panel located on the side of the unit; this panel creates easy access and all wiring information will be indicated on the inside control panel door.

Units will be equipped with a low voltage automatic reset high temperature control, wired to de-energize the main gas valve and maintain fan or blower operation until the high temperature control resets. Units will be equipped with 120/1/60 volt motors, which include internal automatic reset thermal overload protection. SF unit fans will be hubbed with aluminum blades and have fan guard protection. SF units with inputs greater than 250,000 BTU's shall be equipped with dual motors and fan blades on a single shaft for optimum air distribution. SC units shall have centrifugal blowers with an OSHA-type belt guard. SC units with inputs greater than 250,000 BTU's shall be equipped with dual blowers on a single shaft for optimum air distribution. Adjustable and individually removable horizontal louver blades shall be provided on all units for directing air flow.

Units to be vented horizontally or vertically via standard two-pipe configuration. When necessary to vent concentrically through one wall or roof penetration, an optional combustion air inlet kit will be made available.

All units and component assemblies shall be warranted for a period of one year from the date of shipment from the factory or 18 months from the date of manufacture, whichever occurs first. All burners, heat exchangers, and flue collectors shall carry a ten year non-prorated limited warranty on materials and workmanship (subject to appropriate disclaimers).

QVED/QVES/QVSD Series Typical Standard Specification

Furnish and install where shown on plans, gas-fired duct furnaces as made by Sterling HVAC. Duct furnaces must have ETL certification for use downstream (cold air side) of a cooling coil and must be constructed of ETL defined corrosion resistant material with a built-in flue collector. Burners shall be pressed aluminized steel or 409 stainless steel, and shall have stainless steel port protectors. Heat exchangers shall be aluminized steel, 409 stainless steel or 321 stainless steel. Tubes shall not be lighter than 20-gauge. Headers shall not be lighter than 18-gauge. Furnaces to be of neat appearance and good workmanship. All units and components are to be warranted (subject to appropriate disclaimers) from defects in material and workmanship for a period of one year from date of shipment from the factory.

All sizes have exceptionally low pressure drop, making it possible to handle large volumes of air without using an axillary by-pass. Sterling duct furnaces are tested to operate against 2.0 inches water column pressure.

All models are equipped with electronic spark ignition (100% safety shutoff on LP models), 115 volt power venter, vent system pressure switch, high limit switch, fan time delay and 24 volt control transformer.

Indoor Duct Furnaces are completely factory assembled, piped, wired and test fired. All models are ETL certified and approved by these agencies for installation downstream (cold air side) of direct expansion air conditioning coils (stainless steel heat exchanger recommended). All models conform to the latest ANSI Standards for safe and efficient performance. Units are provided with a four-point suspension system and are available for operation on either natural or LP gas.

Casings are die-formed 20-gauge bonderized steel, finished in baked enamel. Heat exchangers are available in aluminized steel, type 409 stainless steel and type 321 stainless steel. Burners are individually removable, die formed and feature stainless steel port protectors. Burners are accessible through a removable, bottom panel.

All models are equipped with a 24 volt control system, which is powered by a factory installed 115/24 volt transformer, Electronic Spark Ignition and Integral Power Venting with a sealed flue collector.

CAB Series Typical Standard Specification

Cabinet blowers shall be as made by Sterling HVAC consisting of a 20-gauge aluminized steel cabinet, with removable side panels, centrifugal fan, motor and filters. Motor and drive shall be furnished by the factory and shipped fully mounted so that field mounting is not required. Motor pulley shall be adjustable as to pitch diameter. When a cabinet blower-duct furnace combination is required, the manufacturer shall furnish the standard cataloged duct transition piece. Furnaces shall be of neat appearance and good workmanship. All units and components are to be warranted (subject to appropriate disclaimers) from defects in materials and workmanship for a period of one year from the date of shipment from the factory.

Tubular Unit Heaters

LIMITED WARRANTY

1. SERIES GG, TF, TC, SF AND SC

Sterling ("the Manufacturer") warrants to the original owner at original installation site that the above models of Sterling Gas—Fired Heaters ("the Product") will be free from defects in material or workmanship for one (1) year from the date of shipment from the factory, or one and one—half (1-1/2) years from the date of manufacture, whichever occurs first. Sterling further warrants that the complete heat exchanger, flue collector, and burners will be free from defects in material or workmanship for a period of ten (10) years from the date of manufacture. If upon examination by the Manufacturer the Product is shown to have a defect in material or workmanship during the warranty period, the Manufacturer will repair or replace, at its option, that part of the Product which is shown to be defective.

- 2. This limited warranty does not apply:
 - (a) if the Product has been subjected to misuse or neglect, has been accidentally or intentionally damaged, has not been installed, maintained or operated in accordance with the furnished written instructions, or has been altered or modified in any way by any unauthorized person.
 - (b) to any expenses, including labor or material, incurred during removal or reinstallation of the Product.
 - (c) to any damage due to corrosion by chemicals, including halogenated hydrocarbons, precipitated in the air.
 - (d) to any workmanship of the installer of the Product.

- 3. This limited warranty is conditional upon:
 - (a) advising the installing contractor, who will in turn notify the distributor or manufacturer.
 - (b) shipment to the Manufacturer of that part of the Product thought to be defective. Goods can only be returned with prior written approval of the Manufacturer. All returns must be freight prepaid.
 - (c) determination in the reasonable opinion of the Manufacturer that there exists a defect in material or workmanship.
- Repair or replacement of any part under this Limited Warranty shall not extend the duration of the warranty with respect to such repaired or replaced part beyond the stated warranty period.
- 5. THIS LIMITED WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EITHER EXPRESS OR IMPLIED, AND ALL SUCH OTHER WARRANTIES, INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY DISCLAIMED AND EXCLUDED FROM THIS LIMITED WARRANTY. IN NO EVENT SHALL THE MANUFACTURER BE LIABLE IN ANY WAY FOR ANY CONSEQUENTIAL, SPECIAL, OR INCIDENTAL DAMAGES OF ANY NATURE WHATSOEVER, OR FOR ANY AMOUNTS IN EXCESS OF THE SELLING PRICE OF THE PRODUCT OR ANY PARTS THEREOF FOUND TO BE DEFECTIVE. THIS LIMITED WARRANTY GIVES THE ORIGINAL OWNER OF THE PRODUCT SPECIFIC LEGAL RIGHTS. YOU MAY ALSO HAVE OTHER RIGHTS WHICH MAY VARY BY EACH JURISDICTION.

Duct Furnaces, Cabinet Blowers

1 YEAR LIMITED WARRANTY UNIT TYPE QVES, QVED, QVSD, CAB 1-4

Duct Furnaces, Separated Combustion Unit Heaters and Cabinet Blowers are warranted by Sterling to be free from defects in materials and workmanship for a period of one (1) year from date of shipment from Sterling's Plant.

Sterling will repair or replace, at its option, any components which, upon inspection, it finds to be defective, provided that the unit has been operated within its listed capacity, has been installed in accordance with the furnished instructions, has not been misused or subject to negligence and has received reasonable and necessary maintenance.

This warranty does not cover loss due to corrosion by chemicals precipitated in the air such as halogenated hydrocarbons.

Sterling will in no event be liable for incidental or consequential damages of any kind whatsoever.

Written permission is required prior to the return of defective components. All returns must be sent with all transportation charges prepaid to the plant designated in the written permission.
