Dear Customer,

I am responding to your request for a Material Safety Data Sheet for our product. The products manufactured by Flexible Technologies are considered to be "Articles" as defined in the Hazardous Communication standard 29 CFR 1910.1200. "Article means a manufactured item which is formed to a specific shape or design during manufacture; which has end use function(s) dependent in whole or in part upon its shape or design during end use; and which does not release or otherwise result in exposure to a hazardous chemical under normal conditions of use." "Articles" are exempt from the standard.

Some of the components used in the products are listed as hazardous ingredients; however during the manufacturing process they become essentially isolated and are not considered as a health hazard. A person could not contact these during normal use.

We are not a chemical manufacturer nor do we manufacture raw materials for use in the finished products. However, if you have any questions on the materials used in a specific product or the limitations to the end use of the product, please contact our customer service department. Thank you for your interest in Flexible Technologies' products and we trust this information meets your needs.

Sincerely,

Jeanine Crowder
Environmental Health and Safety Manager
